

When used as directed pHGuard™ will stabilize pond water pH and maintain buffering capacity at safe levels (between 80-240ppm). pHGuard™ will help prevent wide pH swings which are typical from morning to night.

pHGuard™ makes pond water safe for fish and plants and helps keep water quality problems from arising in the hot summer months. Keeping a properly buffered system is essential for the completion of the nitrification process which allows harmful ammonia to be converted to nitrite and then to nitrate.

pHGuard™ is safe for use with fish, plants, birds or domestic animals that drink from the pond.

#### Application Rates

4 oz / 113 g	Treats up to 1,000 Gallons
8 oz / 226 g	Treats up to 2,000 Gallons
16 oz / 453 g	Treats up to 4,000 Gallons
32 oz / 0.9 kg	Treats up to 8,000 Gallons

#### POND SIZE CALCULATION:

$L \times W \times \text{Avg. Depth} \times 7.5 = \# \text{ of Gallons}$

**Routine Application Rate:** Apply pHGuard™ once a week and after each water change.

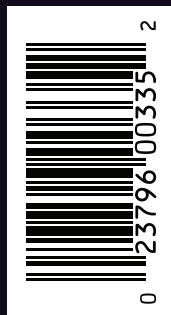

**For Best Results:** pH is typically lowest at dawn and highest at dusk so it is important to test pH at the same time of day.

**Product Notices:** Drastic changes in pH may cause algae blooms, fish and plant stress and possibly death. Safe pH ranges for pond fish and plants is 6.5 – 8.0.

Failure to use as directed, or sudden changes in water conditions not consistent with label, may result in loss or injury to aquatic life. CrystalClear®, Inc. is not responsible for any loss of aquatic life.
